Report

Learning experience:

- This project gave me the opportunity to put into practice every concept and designing feature I learnt in HTML and CSS. I discovered how crucial it is to properly organise web content in order to build an interface that is user-friendly. Understanding the essentials of responsive design was vital for ensuring the website's compatibility with a range of devices and improving accessibility for a larger user base. I encountered numerous challenges and learned a lot while using HTML and CSS to create a wildlife website.

Challenges and overcoming challenges:

- Faced difficulties creating the navigation bar for each page- watched Youtube tutorials and incorporated other learned concepts like flex to create a decent bar.
- Trying to resize every image without losing the quality of the image significantly.- Used the Squoosh website to resize images with lossless compression.
- Making sure the CSS styling fit all size ranges within the media query for both mobiles and desktops. And changing certain styling to adapt accordingly. For instance , using flex box on desktop and not using it on mobile. - . Adopting a mobile-first approach from the outset facilitated a smoother responsive design implementation.
- Maintaining a consistent look for the first 5 webpages. – testing each page numerous times side by side to remove any inconsistencies to ensure the webpage designs are related to each other.
- Creating simple animations for the Yala and Wilpattu webpages- watched Youtube videos on how to create subtle animations using CSS only.

Validation of HTML and CSS pages

validator.w3.org/nu/#file

This tool is an ongoing experiment in better HTML checking, and its behavior remains subject to change

Showing results for leopard.html

Checker Input

Show ☐ source ☐ outline ☐ image report [Options...](#)

Check by [file upload](#) [Choose File](#) No file chosen

Uploaded files with .xhtml or .xht extensions are parsed using the XML parser.

[Check](#)

Use the Message Filtering button below to hide/show particular messages, and to see total counts of errors and warnings.

[Message Filtering](#)

- Warning** Section lacks heading. Consider using `h2` - `h6` elements to [add identifying headings to all sections](#), or else use a `div` element instead for any cases where no heading is needed.
From line 95, column 13; to line 95, column 21
`<section>`
- Error** Stray start tag `footer`.
From line 106, column 5; to line 106, column 12
`body>` `<footer>`

Animalsinsrilanka.html

validator.w3.org/nu/#file

Nu Html Checker

This tool is an ongoing experiment in better HTML checking, and its behavior remains subject to change

Showing results for animalsinsrilanka.html
